Subject: Comment: The Battlement Mesa HIA

From all available evidence it appears that drilling for natural gas within Battlement Mesa's PUD is dangerous and risky for the many reasons stated in the HIA report. Many people will be effected by the lethal chemicals, possible explosions, unforeseen accidents, as well as the physical and mental stress which is sure to accompany drilling and its aftermaths. The sad thing is that when it occurs, it probably cannot be proven that gas drilling was responsible. Please give some serious concern to the health and well-being of the people of Battlement Mesa which includes pregnant mothers, infants, children, and the elderly. Please do your research and not allow it to override your politics! Thank You, Garland White
